Director of Eyecare, Wear Eyewear

« I can safely and efficiently practice while also giving the patient confidence they are receiving top notch and modern care. »

For years I had practiced as we have all done for ages: sitting one foot from my patient, reaching up at an awkward angle, and spinning the dials of a manual phoropter while reaching the other direction to adjust my projector Snellen chart. Day after day I would make jokes and apologize about encroaching into a patient's personal space. Night after night I would leave work with neck and shoulder pain.

That all changed when we were fortunate enough to obtain a Visionix® VX65 automated digital phoropter from Luneau Technology. With an extremely intuitive design, we were up and running within minutes. With the addition of this unit, I was now able to sit comfortably anywhere in the exam room and easily control all functions of the phoropter and display chart from a tablet. Not only did I eliminate any neck and shoulder pain, but my patients loved it!

Almost without exception they would comment on how amazing it was that I was able to sit back at my desk and run the exam from a tablet.

In these current times, where awareness of social distancing and personal space is heightened, having the VX65 in my practice is a blessing. I can safely and efficiently practice while also giving the patient confidence they are receiving top notch and modern care. Absolutely can't recommend this product highly enough!
